PRAGATHI COSMIC

Website UI/UX, Siri AI Assistant & Manual Verification Notes

Live website: https://pragathi-cosmic.hatchable.site/

1. Project Overview

Pragathi Cosmic is a personalized, space-themed interactive page centered on the name “Pragathi.” It combines a dark starfield, glowing heart logo, moon character, colorful heart controls, and a floating Siri AI assistant interface.

2. Main UI and Layout

• Deep navy/purple cosmic background with scattered stars and glow effects.

• Red heart logo with black outline, yellow stars, and glowing “Pragathi” script.

• Smiling moon with “TAP TO WAKE ■” cue in the upper-right.

• Centered “YOU ARE MY LITTLE UNIVERSE” message and five colorful heart buttons.

• Floating launcher showing “Created By Srinath_Arya” and “Start Call to Siri.”

• Expanded assistant panel with greeting, message field, send/call controls, and expand/collapse icons.

3. AI Assistant and Interaction Notes

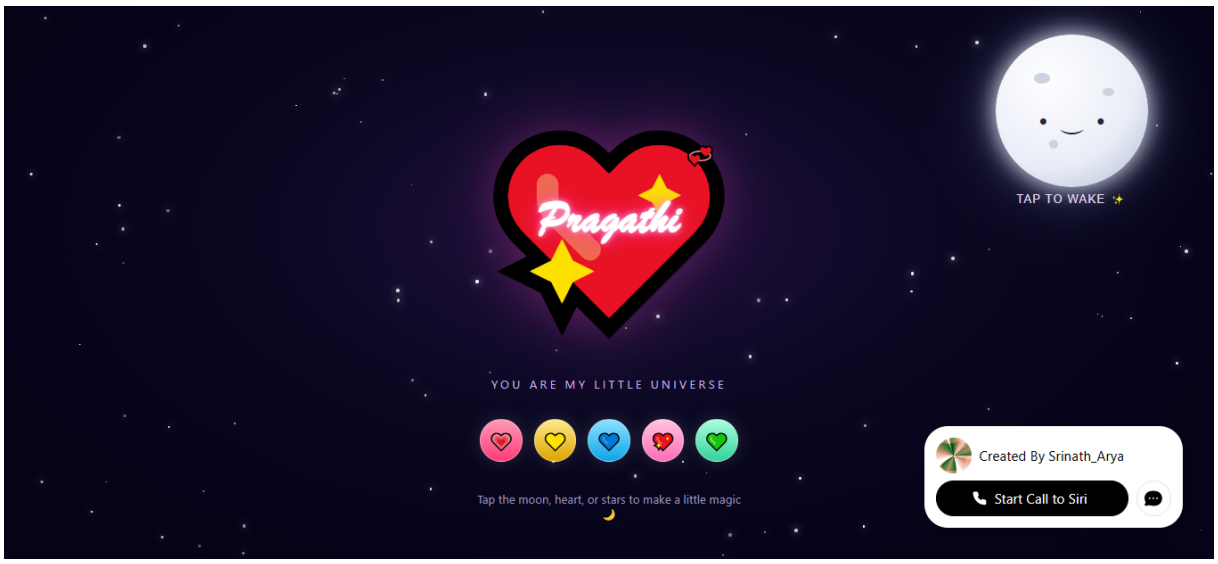

The expanded screenshots show the greeting “Hey there, I'm Siri your Ai Assistant. How can I help you today?” and visible chat/call controls. This confirms the interface is visible, not that a successful response or voice call has been tested.

Element	Expected behavior	Evidence
Moon / wake cue	Triggers wake interaction or visual effect.	Visible; result not confirmed.
Heart buttons	Trigger playful effects/actions.	Visible; each result needs testing.
Start Call to Siri	Opens assistant or begins call flow.	Launcher visible; successful call not verified.
Message + send	Submits text and displays a response.	Controls visible; response not verified.
Expand/collapse	Resizes or changes panel state.	Multiple layouts shown; behavior needs testing.

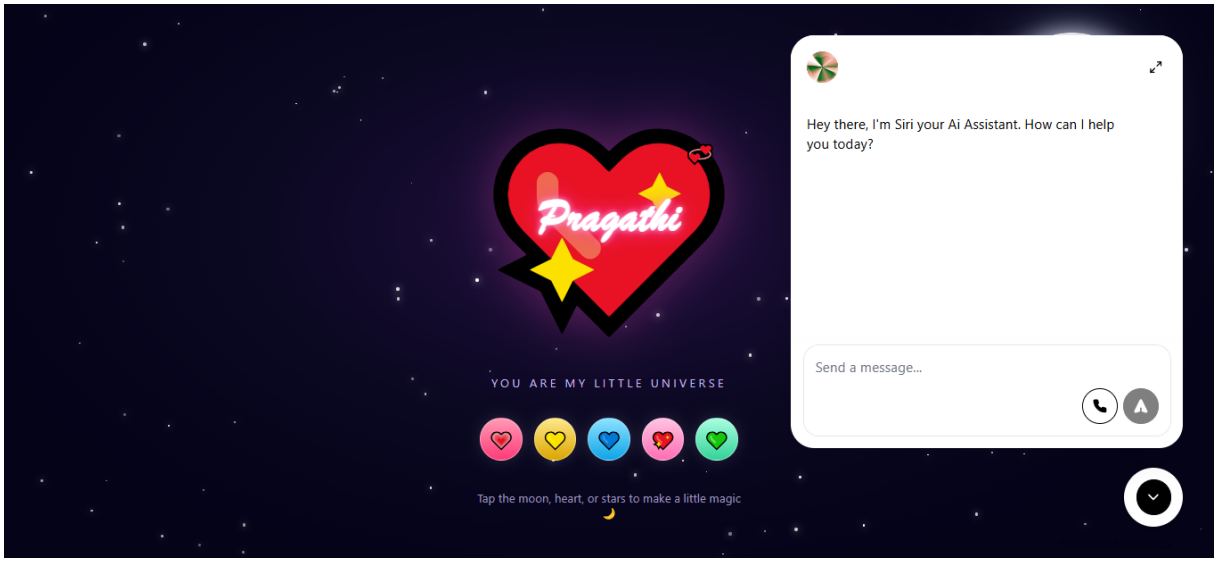

4. Screenshot Review

The screenshots show the main page with the assistant launcher and two expanded assistant layouts. The expanded panel overlays part of the page artwork, so placement should be checked at desktop and mobile sizes.

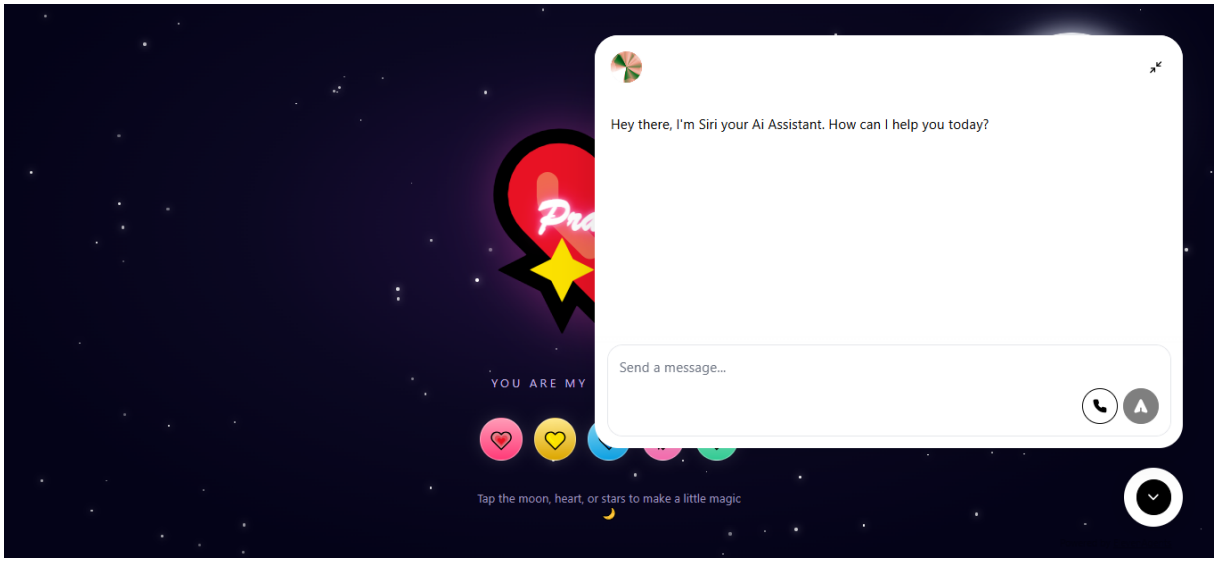

Screenshot 1 — Main page with Siri assistant collapsed

Screenshot 2 — Siri assistant expanded

Screenshot 3 — Expanded assistant in a wider position

5. Manual Scenarios to Verify

Recommended checks only; do not mark Pass until observed.

• **Moon tap:** Tap the moon and verify the intended wake animation or interaction.

• **Each heart button:** Tap each colored heart separately and check whether the intended effect appears.

• **Assistant opens:** Select “Start Call to Siri” and verify the panel opens without a blank or frozen state.

• **Text conversation:** Send a simple question and verify a relevant reply appears.

• **Follow-up and unknown question:** Ask a follow-up, then ask something outside the assistant's scope; check clarity and fallback behavior.

• **Voice call:** Use the call control and verify permission prompts, start/end behavior, and any error messages.

• **Expand/collapse:** Open, expand, collapse, and reopen the assistant several times.

• **Responsive layout:** Check mobile portrait, mobile landscape, and desktop widths; ensure the assistant does not hide all important controls.

• **Keyboard accessibility:** Use Tab/Enter/Space where applicable; verify visible focus and accessible labels.

• **Performance and motion:** Check whether animations remain smooth and consider a reduced-motion option.

6. Illustrative Development Prompt

Reconstructed example, not a verified original prompt: “Build a responsive personalized cosmic-themed website called Pragathi Cosmic. Use a deep navy starfield, glowing heart logo, smiling moon with a wake cue, the phrase ‘You are my little universe,’ and five colorful heart buttons. Add a Siri AI assistant widget with chat input, send button, call control, and expand/collapse behavior. Make controls genuinely interactive,

mobile-friendly, accessible, and provide clear loading, error, and fallback states.”

7. Hosting and Verification Notes

The supplied live URL is https://pragathi-cosmic.hatchable.site/. Hosting is indicated by the supplied Hatchable URL, but the source repository, deployment pipeline, and auto-publishing setup were not verified. Visual findings are based on the screenshots; manually test the live page before claiming end-to-end behavior.

8. Project Summary

Pragathi Cosmic is a personalized cosmic page with heart-themed interactions and a Siri AI assistant interface. The screenshots demonstrate the main page and assistant-open states. Validate actual button behavior, assistant responses and calling, responsive layout, and accessibility.
